HNM Total Recon is committed in providing surgeons and health care professionals with advanced surgical solutions for effective and time-saving treatment of their patients. Our most important task is meeting surgeons' needs. We accomplish this by creating key partnerships and driving innovative product development.

SPORTS MEDICINE

GRAFTS

Using our proprietary processing technology HNM is able to increase the number of patients who can benefit from a transplant. Exceptional care and quality, coupled with scientific knowledge, ensures that we provide the foundation for the development of extraordinary regenerative products that positively impacts patient healing.

10cmx5cmx2.0mm	HTR-06-302103

HNM Dermal Matrix human derived dermal grafts are decellularized to remove cellular components and preserve the biological properties that promote revascularization and repair of damaged tissue.

The indications for use of Dermal Matrix include the replacement of damaged or inadequate integument tissue, or for the repair, reinforcement or supplemental support of soft tissue defects such as breast reconstruction, abdominal wall repair, and reinforcement of tendons.

HNM Dermal Matrix is approved as a wound covering and may be used in the treatment of diabetic ulcers, pressure ulcers, and partial and full-thickness wounds. HNM Dermal Matrix maintains the elasticity of human skin and provides a natural scaffold for cellular and capillary remodeling of the damaged site.

HNM employs strict quality assurance and quality control procedures to ensure patient safety. HNM's medical director, a licensed physician performs an extensive medical review of the donor's medical/social history to determine eligibility. HNM only accepts donors whose screening, serologic, and microbiologic tests meet or exceed the current standards established by the Food and Drug Administration (FDA) and the American Association of Tissue Banks (AATB).

Donor blood samples are tested by a CLIA licensed facility and must be found negative against infectious diseases such as Hepatitis B surface antigen, Hepatitis B core antibody, Hepatitis C antibody, Syphilis, HIV-1/2 antibody, HIV-1 (NAT), HCV (NAT), and HTLV-I/II antibody.

HNM products are processed aseptic in accordance with AATB standards and FDA federal regulations. Grafts are sterilized using low-dose gamma radiation to achieve a medical device sterility assurance level (SAL) of 10^{-6} . Sports medicine grafts are stored frozen between -40°C to -80°C , and have a shelf-life of up to 5 years from date of packaging.
